General Description

The TYCO DV-5A Automatic Water Control Valve Deluge Electric Actuation are diaphragm type valves that can be used in deluge fire protection systems. When properly trimmed, the double seat design of the DV-5A Valve also provides actuation of fire alarms upon system operation.

The diaphragm style design of the DV-5A Valve allows external resetting, providing for easy resetting of a deluge system without having to open a valve handhole cover to manually reposition a clapper and/or latch mechanism. Simply re-pressurizing the diaphragm chamber resets the valve.

The DV-5A features internal and external coating of the valve to provide corrosion resistance. The external corrosion resistance of the epoxy coating permits the use of the DV-5A in corrosive atmospheres associated with many types of industrial processing plants and outdoor installations.

Available End Connections and Weights — lb/(kg)

| End Connection | | Nominal Valve Size ANSI Inches (DN) | | | | | | |
|----------------|--------|---|--------------|--------------|---------------|---------------|---------------|----------------|
| | | 1 1/2 (40) | 2 (50) | 3 (80) | 4 (100) | 6 (150) | 165,1 mm | 8 (200) |
| Inlet | Outlet | | | | | | | |
| Thread | Thread | 26 (11,8) | 25 (11,3) | N/A | N/A | N/A | N/A | N/A |
| Groove | Groove | 25 (11,3) | 25 (11,3) | 60 (27,2) | 95 (43,1) | 177 (80,3) | 177 (80,3) | 327 (148,3) |
| Flange | Groove | N/A | N/A | 66 (30,0) | 106 (48,1) | 190 (86,2) | N/A | 346 (157,0) |
| Flange | Flange | N/A | N/A | 72 (32,7) | 116 (52,6) | 204 (92,5) | N/A | 365 (165,6) |

The DV-5A Deluge Electric Actuation Valve is offered with the DV-5A Valve and separately ordered semi-assembled trim as shown in Figure 5.

The DV-5A Deluge Electric Actuation Valve is offered with or without a System Main Control Valve.

NOTICE

The DV-5A valves described herein must be installed and maintained in compliance with this document, as well as with the applicable standards of the NATIONAL FIRE PROTECTION ASSOCIATION (NFPA), in addition to

the standards of any other authorities having jurisdiction. Failure to do so may impair the performance of these devices.

The owner is responsible for maintaining their fire protection system and devices in proper operating condition. Contact the installing contractor or product manufacturer with any questions.

NOTES

- a. Hex Bolt, Short, Qty. 6 in 6 and 8 inch (DN150 and DN200) assemblies.
- b. Lift Washer not used in 1-1/2 and 2 inch (DN40 and DN50) assemblies.
- c. N/R = Not Replaceable

- d. Order replacements parts only via Part Numbers given, do not replace Hex Bolt, Hex Nut, Lift Washer or Hoist Ring with common hardware parts.
- e. Also applicable to metric 165,1 mm size.

NOTES

a. Also applicable to metric 165,1 mm size.

Technical Data

Approvals

UL and C-UL Listed
FM Approved
VdS Approved*
LPCB Approved*
EAC Approved

Listings and Approvals are based on DV-5A Deluge Electric Actuation Valve being trimmed as described in Figure 5.

For local EMEA regional approvals, consult with your local distributor.

* VdS and LPCB approval is additionally based on installing the VdS and LPCB required water column prevention drain components provided with assemblies in the Ordering Procedure section.

DV-5A Valve

Components for the 1 1/2 in. to 8 in. (DN40 to DN200) DV-5A Valves are shown in Figure 1. The DV-5A Valves are for vertical installations. They are rated for use at a service pressures of 20 psi to 300 psi (1,4 bar to 20,7 bar).

The take-out dimensions are shown in Figure 3, and the flanged connections are available drilled per ANSI, ISO, AS, and JIS specifications (see Table A). Threaded inlet and port connections are available in NPT or ISO 7-1. Threaded port connections are NPT threaded.

Note: PN16 flanges are pressure rated to 16 bar.

Valve Trim

The maximum pressure rating for the DV-5A Deluge Electric Actuation is dependent on separately ordered solenoid valve per Technical Data Sheet TFP2180

When the system pressure is greater than 175 psi (12,1 bar), provision is to be made to replace the standard order 300 psi (20,7 bar) water pressure gauges with separately ordered 600 psi (41,4 bar) water pressure gauges.

If the addition of an alarm control valve is desired or required by the local AHJ, the alarm control valve noted as Item H in Figure 8 is to be a separately ordered electronically supervised normally open valve.

External trim connections are NPT threaded. EMEA trim is provided with NPT x ISO 7-1 thread adapters.

Pressure Loss

See Graph A

Detection System

See Electric Actuation subsections.

Materials of Construction

Valve Body

Epoxy coated ductile iron per ASTM A536-77, Grade 65-45-12

Diaphragm Cover

Epoxy coated ductile iron per ASTM A536-77, Grade 65-45-12

Diaphragm

Polyester fabric reinforced, TEFLON coated, EPDM rubber per ASTM D2000

Diaphragm Cover Fasteners

Aluminum zinc coated steel

Common Hardware Trim

- Common hardware pipe fittings are galvanized or black as required and are malleable per ASME B16.3.
- Common hardware pipe nipples are galvanized or black as required and are Schedule 40 per ASTM A53 or A135.
- Common hardware compression fittings are brass per ASTM B16.
- Common hardware tubing is Type L copper per ASTM B88.

Operation

The TYCO DV-5A Valve is a diaphragm style valve that depends upon water pressure in the diaphragm chamber (See Figure 2A) to hold the diaphragm closed against the water supply pressure.

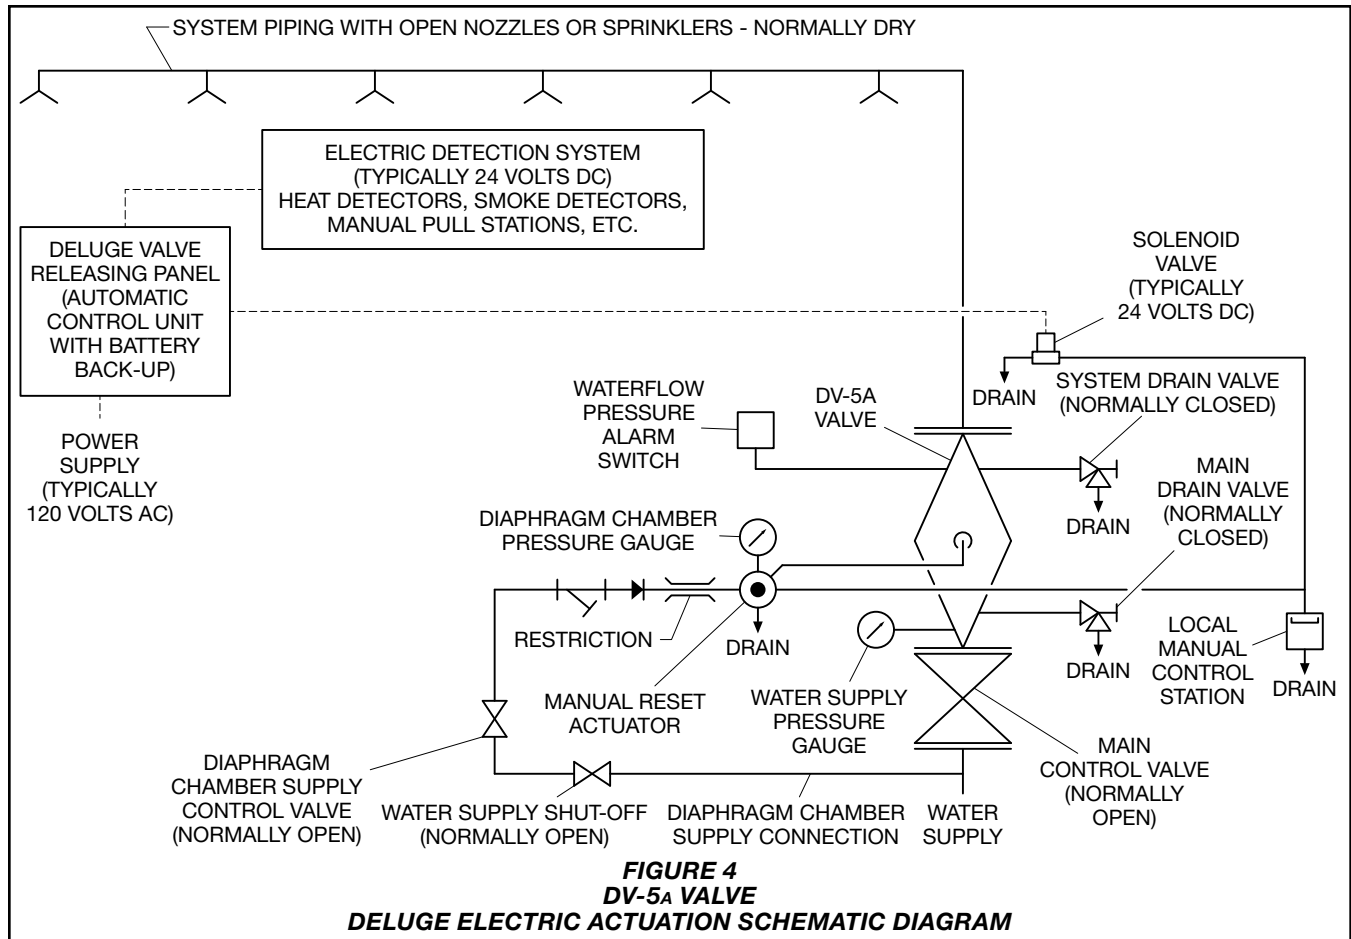

When the DV-5A valve is set for service, the diaphragm chamber is pressurized through the trim connections from the inlet side of the system's main control valve.

Opening the electric actuation trips the Model MRA-1 manual reset actuator. Tripping the MRA-1 releases water from the DV-5A diaphragm chamber faster than it can be replenished through a 1/8 in. (3,2 mm) restriction located in the diaphragm chamber supply connection. Release of water through the MRA-1 results in a rapid pressure loss in the DV-5A diaphragm chamber. The force differential applied through the diaphragm to hold the diaphragm in the set position is then reduced below the valve trip point. The water supply pressure then forces the diaphragm open permitting water to flow into the system piping, as well as through the alarm port to actuate the system alarms (See Figure 2B).

Upon opening of the DV-5A valve, the Model MRA-1 manual reset actuator, which is described in Technical Data Sheet TFP1387, opens to constantly vent the DV-5A diaphragm chamber to hydraulically latch the DV-5A in the tripped position until manually reset.

See the Electric Actuation section for additional information.

Electric Actuation

The electric actuation trim forms a part of the laboratory approval of the DV-5A valves and is necessary for their proper operation.

The electric actuation trim is required for electric operation of the DV-5A valve by a detection system consisting of electrical devices such as heat sensitive thermostats, smoke detectors, and/or electric manual pull stations as shown in Figure 4.

Dimensions are provided in Figure 15.

Note: The normally closed, de-energized, solenoid valve is separately ordered and selected based on the required laboratory approval acceptable to the authority having jurisdiction. Refer to Technical Data Sheet TFP2180 for specific laboratory approvals.

Consult with the applicable standards of the Approval agency regarding installation criteria pertaining to electric actuation circuitry.

Due to the functionality of the Model MRA-1 manual reset actuator, the release circuit of the releasing panel need only provide the typical ten minutes of alarm condition intended to energize the solenoid valve to open. After the ten minute duration, at which point should the solenoid valve become de-energized and close (especially while operating under battery back-up), the MRA-1 will have already automatically opened, thereby preventing the DV-5A diaphragm chamber from becoming re-pressurized, and preventing an inadvertent closing of the DV-5A during a fire event.

Installation

The TYCO DV-5A Valve Electric Actuation is to be installed in accordance with this section.

NOTICE

DV-5A Automatic Water Control Valves are designed to be used in freshwater systems. When the supply is from an alternative source such as brackish water, saltwater, or contains additives such as foam, the limited warranty is reduced to one year from the time of installation. An increase in frequency of inspections is required when the valve is exposed to such supplies and other corrosive conditions or chemicals that could impact valve materials or the operation of the assembly. The system and all components must be designed accordingly for the increased demand. It is required to thoroughly flush the valve and trim assembly with freshwater and reset to the set condition after each operation.

Proper operation of the DV-5A valves depends upon their trim being installed in accordance with the instructions given in this technical data sheet. Failure to follow the appropriate trim diagram may prevent the DV-5A valve from functioning properly, as well as void approvals and the manufacturer's warranties.

The DV-5A valve must be installed in a readily visible and accessible location.

The DV-5A valve, associated trim, and wet pilot lines must be maintained at a minimum temperature of 40°F (4°C).

Heat tracing of the DV-5A valve or its associated trim is not permitted. Heat tracing can result in the formation of hardened mineral deposits that are capable of preventing proper operation.

Always open the system control valves slowly to avoid a sudden rush of water entering the system.

The DV-5A valve is to be installed in accordance with the following criteria:

Step 1. All nipples, fittings, and devices must be clean and free of scale and burrs before installation. Use pipe thread sealant sparingly on male pipe threads only.

Step 2. The DV-5A valve must be trimmed in accordance with one of the trim illustrations shown in Figure 5.

Note: *If the addition of an alarm control valve is desired or required by the local AHJ, the alarm control valve noted as Item H in Figure 8 is to be a separately ordered electronically supervised normally open valve.*

Step 3. Care must be taken to ensure that check valves, strainers, globe valves, etc. are installed with the flow arrows in the proper direction.

Step 4. Drain tubing to the drip funnel must be installed with smooth bends that will not restrict flow.

Step 5. The main drain and drip funnel drain may be interconnected provided a check valve is located at least 12 in. (300 mm) below the drip funnel.

Step 6. Suitable provision must be made for disposal of drain water. Drainage water must be directed such that it will not cause accidental damage to property or danger to persons.

Step 7. Connect the diaphragm supply valve to the inlet side of the system main control valve in order to facilitate setting of the DV-5A valve. Refer to Figure 8 as applicable.

Step 8. Conduit and electrical connections are to be made in accordance with the applicable standards of the approval agency.

Step 9. Before a system hydrostatic test is performed, the DV-5A diaphragm chamber is to be depressurized, the automatic drain valve is to be temporarily replaced with a plug, and the diaphragm cover bolts must be uniformly and securely tightened using a cross-draw sequence. After tightening, double-check to make certain that all of the diaphragm cover bolts are securely tightened. See Table C in the Care and Maintenance section for torque specifications.

Valve Setting Procedure

Perform Steps 1 through 13 when initially setting the TYCO DV-5A Valve, after an operational test of the fire protection system, or after system operation due to a fire. Refer to Figures 16, 17, or 18, as applicable.

Step 1. Close the system main control valve (B).

Step 2. Close the diaphragm supply valve (P).

Step 3. Open the main drain valve (D), system drain valve (E), and all auxiliary drains in the system. Close the auxiliary drain valves and the system drain valve (E) after water ceases to discharge. Leave the main drain valve (D) open.

At this time make certain that the pressure gauge valves and the alarm control valve (H), as applicable, are open.

Step 4. Depress the plunger of the automatic drain valve (F) to verify that it is open.

Step 5. Clean the diaphragm supply strainer (Q) by removing the clean-out plug and strainer basket. The diaphragm supply strainer (Q) may be flushed out by momentarily opening the diaphragm supply valve (P).

Step 6. Reset the automatic electric actuation by resetting the electric detection system in accordance with the manufacturer's instructions to de-energize the solenoid valve.

NOTICE

In order to prevent the possibility of a subsequent operation of an overheated solder type pilot sprinkler, any solder type pilot sprinklers that were possibly exposed to a temperature greater than their maximum rated ambient must be replaced.

Step 7. Operate (open) the manual control station (M) and then open the diaphragm supply valve (P). After unaerated water ceases to discharge from the manual control station (M) drain tube, slowly close the operating lever by pushing it up. Do not close the hinged cover at this time.

Step 8. After allowing water to flow out of the manual reset actuator (N) drain tube until aerated water ceases to discharge, reset the manual reset actuator (N) by pressing the reset knob and hold until water stops flowing from its drain tube and the pressure builds and reaches approximately 15 psi (1,0 bar) on the diaphragm gauge (K). Pressure will then build up in the DV-5A diaphragm chamber.

Note: *After relieving trapped air, check the manual reset actuator (N) to make sure there is no water draining from its drain tube. If water is draining, reset the manual reset actuator (N) as previously instructed.*

Step 9. Verify the ability for the DV-5A diaphragm to hold pressure as follows:

- With the diaphragm chamber pressurized per Step 8, temporarily close the diaphragm supply valve (P), and then observe the diaphragm gauge (K) for a drop in pressure.
- If a drop in pressure is noted, the DV-5A diaphragm is to be replaced and/or any leaks must be corrected before proceeding to the next step.

- If the diaphragm gauge (K) indicates no drop in pressure, re-open the diaphragm supply valve (P) and proceed to the next step.

Step 10. Partially open the system main control valve (B). Slowly close the main drain valve (D) as soon as water discharges from the main drain valve (D). Observe the automatic drain valve (F) for leaks. If there are leaks, determine/correct the cause of the leakage problem before proceeding.

NOTICE

When the system main control valve (B) is partially opened, the pressure on the DV-5A diaphragm chamber may increase. This increase in pressure is normal, and if the pressure is greater than the valve trim maximum pressure rating provided in the Technical Data section, the pressure is to be relieved to at least the valve trim pressure rating by partially and temporarily opening the manual control station (M); however, do not allow the pressure as indicated on the diaphragm gauge (K) to drop below the supply pressure shown on the water supply gauge (J), since this action may result in tripping of the DV-5A valve.

Step 11. Close the hinged cover of the manual control station (M), and insert a new break rod in the small hole through the top of the enclosing box.

Step 12. Fully open the system main control valve (B).

Step 13. After setting a fire protection system, notify the proper authorities and advise those responsible for monitoring proprietary and/or central station alarms.

NOTES

1. Port Connections P1 through P7 are described in Figure 2.
2. External Trim Connections C1 through C5 are described in Figure 18.
3. When ordering pre-assembled "DV-5A Valve with Galvanized Trim" or pre-assembled "DV-5A Valve with Galvanized Trim and Butterfly Valve", Items A1 through A9 are provided, as applicably related to valve size, and Item A9 is provided as P/N 52-287-1-124 described in Technical Data Sheet TFP2180.
4. When ordering DV-5A Trim separately from the DV-5A Valve, Items A1 through A9 are separately ordered. Water Pressure Gauges for EMEA valve trim are also separately ordered.

FIGURE 5
DV-5A VALVE
DELUGE ELECTRIC ACTUATION TRIM
SEMI-ASSEMBLED

- NOTES**
1. Port Connections P1 through P7 are described in Figure 2.
 2. External Trim Connections C1 through C5 are described in Figure 8.
 3. When ordering pre-assembled "DV-5A Valve with Galvanized Trim" or pre-assembled "DV-5A Valve with Galvanized Trim and Butterfly Valve", Items A1 through A9 are provided, as applicably related to valve size, and Item A6 is provided as P/N 52-287-1-124 described in Technical Data Sheet TFP2180.
 4. When ordering DV-5A Trim separately from the DV-5A Valve, Items A1 through A9 are separately ordered. Water Pressure Gauges for EMEA valve trim are also separately ordered.
 5. V1 through V3 Water Column Prevention Drain Components are required for VdS and LPCB Approval.

FIGURE 7
DV-5A VALVE
DELUGE ELECTRIC ACTUATION TRIM ASSEMBLY
NOMINAL DIMENSIONS

Care and Maintenance

The following procedures and inspections must be performed as indicated, in addition to any specific requirements of the NFPA and any applicable standards recognized by the Approval agency. Any impairment must be immediately corrected. See Figure 8.

NOTICE

If the water supply needs to be shut off to the DV-5A valve and trim and cannot be shut off upstream of the system, close the system main control valve (B), the diaphragm supply valve (P), and the inverted flare shut-off valve (R). This will allow any trim above the system main control valve (B) to be taken apart for service if necessary.

The frequency at which the following procedures and inspections are to be performed are to be in accordance with the NFPA and any applicable specific requirements of the standards recognized by the Approval agency.

Before closing a fire protection system main control valve for maintenance work on the fire protection system that it controls, permission to shut down the affected fire protection systems must first be obtained from the proper authorities and all personnel who may be affected by this action must be notified.

The owner is responsible for the inspection, testing, and maintenance of their fire protection system and devices in compliance with this document, as well as with the NFPA and any applicable standards recognized by the Approval agency. Contact the installing contractor or product manufacturer with any questions.

Some procedures in this section result in the operation of the associated alarms. Notify the owner and the fire department, central station, or other signal station to which the alarms are connected before performing the tests.

It is recommended that automatic sprinkler systems be inspected, tested, and maintained by a qualified Inspection Service in accordance with the NFPA and any applicable standards recognized by the Approval agency.

Drop in Water Supply Pressure Below Normal Range

NOTICE

If the water supply pressure is significantly reduced below the normally expected static pressure range (as could occur in the case of a water main break or repair), and there is a subsequent drop in the diaphragm chamber water pressure below its normal range (for example, due to a leak in a piping connection to or from the diaphragm chamber or, a leak in the diaphragm chamber check valve caused by dirt or debris in the check valve seal area), a deluge valve such as the DV-5A could inadvertently trip, if its water supply pressure is quickly restored.

A drop in the water supply pressure to below its normal range (as in the case of an interrupted water supply condition) constitutes an emergency impairment.

Should this condition occur, immediately close the system main control valve (B) and use the following procedure to reset the system:

Step 1. Prior to the water supply pressure being restored to the closed system main control valve (B), note the pressure indicated by the diaphragm gauge (K) and determine if the pressure is within the normally expected range.

Step 2. If the diaphragm chamber pressure is below the normal range, check for and correct any source of leakage from the diaphragm chamber prior to resetting the system.

Step 3. After the water supply pressure is restored to the system main control valve (B), reset the DV-5A valve in accordance with the Valve Setting Procedure section.

NOTICE

For fire protection systems subject to an emergency impairment caused by an interrupted water supply condition, it is recommended that consideration be given to installing a low water supply pressure switch with the appropriate alarm/indications to monitor the water supply pressure.

Waterflow Alarm Test Procedure

To test the waterflow alarm, open the alarm test valve (G), which will allow a flow of water to the waterflow pressure switch (C) and/or water motor alarm. Upon satisfactory completion of the test, close the alarm test valve (G).

To ensure drainage of the alarm line, depress the plunger on the automatic drain valve (F).

Electric Actuation Operation Test Procedure

Proper operation of the DV-5A valve, such as opening of the DV-5A valve as during a fire condition, must be verified as follows:

Step 1. If water must be prevented from flowing beyond the riser, perform the following steps.

- Close system main control valve (B). Open main drain valve (D).
- Open system main control valve (B) one turn beyond position at which water just begins to flow from main drain valve (D).
- Slowly close the main drain valve (D).

Step 2. Test the deluge releasing panel in accordance with the manufacturer's instructions to energize the solenoid valve.

Note: *Be prepared to quickly perform Steps 3, 4, and 5 if water must be prevented from flowing beyond the riser.*

Step 3. Verify that the DV-5A valve has tripped, as indicated by the flow of water into the system.

Step 4. Close the system main control valve (B).

Step 5. Close the diaphragm supply valve (P).

Step 6. Reset the DV-5A valve in accordance with the Valve Setting Procedure.

Electric Actuation Solenoid Valve Test Procedure

Proper operation of the solenoid valve for electric actuation must be verified at as follows:

Step 1. Close the system main control valve (B).

Step 2. Open the main drain valve (D).

Step 3. Test the deluge releasing panel in accordance with the manufacturer's instructions to energize the solenoid valve.

Step 4. Verify that there is a flow of water from the Solenoid Valve drain connection.

Step 5. Verify that the diaphragm chamber pressure has decreased to below 25% of the water supply pressure.

NOTES
1. Also applicable to metric 165,1 mm size.

**TABLE C
DIAPHRAGM COVER BOLTS
MINIMUM TORQUE**

Step 6. Reset the electric detection system in accordance with the manufacturer's instructions to de-energize the solenoid valve (S), and proceed as follows:

- Water should cease draining from the solenoid valve (S) but remain draining from the manual reset actuator (N).
- Press the reset knob on the manual reset actuator (N) and hold it a few seconds until water stops flowing from its drain tube.
- Pressure will then build up in the DV-5A diaphragm chamber.
- After system pressure is restored in the DV-5A diaphragm chamber, inspect the solenoid valve (S) and manual reset actuator (N) for leaks at the drain tube. Any leaks must be corrected before proceeding to the next step.

Step 7. Partially open the system main control valve (B). Slowly close the main drain valve (D) as soon as water discharges from the main drain valve (D). Observe the automatic drain valve (F) for leaks. If there are leaks, determine/correct the cause of the leakage problem. If there are no leaks, the DV-5A valve is ready to be placed in service and the system main control valve (B) must then be fully opened.

Internal Valve Inspection

Once every five years during the annual operational test procedure, and prior to the DV-5A valve being reset and the DV-5A valve de-pressurized, the interior of the DV-5A valve must be cleaned and inspected for wear and damage. Damaged or worn parts must be replaced. Replacement of the diaphragm every ten years is recommended, or more frequently if inspections and/or wear and tear of the diaphragm warrants more frequent replacement.

NOTICE

The diaphragm cover may be removed between Steps 4 and 5 of the Valve Setting Procedure instructions, since at that point the DV-5A valve should be de-pressurized as evident by a zero gauge reading on the diaphragm gauge (K) and water supply gauge (J), as well as no water discharging from the automatic drain valve (F).

To perform internal valve inspection between Steps 4 and 5 of the Valve Setting Procedure, remove the diaphragm cover as follows:

Step 1. Close the inverted flare shut-off valve (R).

Step 2. Remove the copper tube fitting between the diaphragm supply valve (P) and the inverted flare shut-off valve (R).

Step 3. Loosen the union securing the electric actuation trim and remove the actuation trim.

Step 4. Loosen and remove the union between the diaphragm cover and the MRA-1 manual reset actuator (N) and remove the MRA-1 manual reset actuator (N) subassembly.

Step 5. Remove the diaphragm valve cover hardware, then slowly remove the diaphragm cover and perform internal valve inspection. Clean the valve interior and replace parts as necessary.

After cleaning and inspecting valve interior, and replacing parts as necessary, reinstall the diaphragm cover by completing the following steps to assure the diaphragm cover fasteners are uniformly and securely tightened.

Step 1. With reference to Figure 1, ensure that the diaphragm is properly oriented and that the proper hardware arrangement is utilized when assembling the diaphragm covers. The hardware arrangements differ depending on the size of the DV-5A valve.

Step 2. By first using the long hex bolts, support of the diaphragm cover will be provided before installing the short hex bolts. Align diaphragm in proper orientation with valve body, and

then align diaphragm cover in proper orientation with valve body. Hand-tighten all fasteners.

Step 3. Using crossdraw sequence to assure uniformity, wrench-tighten long hex bolts and short hex bolts to appropriate torque values. Repeat crossdraw sequence two to three times at incremental torque values until reaching the torque values found in Table C.

Step 4. Inspect to assure all hex bolts are securely tightened.

Step 5. Using the union, secure the MRA-1 manual reset actuator to the diaphragm cover.

Step 6. Using the union, secure the electric actuation trim.

Step 7. Replace the copper tube fitting between the diaphragm supply valve (P) and the inverted flare shut-off valve (R).

Step 8. Ensure that the unions and flare fittings are securely tightened.

Step 9. With the diaphragm supply valve (P) closed, fully open the inverted flare shut-off valve (R) stainless steel screw (approximately 1/2 in.) until resistance is met so as not to break the internal roll-pin. The internal roll-pin stops the removal of the inverted flare shut-off valve (R) stainless steel screw.

Step 10. Proceed with Step 5 of the Valve Setting Procedures section in this data sheet.

NOTICE

If the water supply contains chemicals which tend to attack a polyester fabric-reinforced, EPDM rubber or the five year inspection indicates a build-up of debris within the DV-5A valve that could affect its proper operation, then the frequency of the internal valve inspection procedure must be appropriately increased.

With reference to Figure 1, make certain that the diaphragm is correctly oriented; otherwise, the DV-5A deluge valve cannot be properly set.

Under-tightening the diaphragm cover bolts can result in internal and external leakage.

Use only TYCO replacement fasteners as specified in Figure 1.

Do not apply adhesives, lubricants, or other substances to the diaphragm or valve body.

Limited Warranty

| 8 in. (DN200) | 551010380 |

Notes:

Americas pressure switches, P/N 52-287-1-124 Solenoid Valve, and psi/kPa water pressure gauges are provided.

This arrangement is available for EMEA and APAC upon request. Contact your local distributor.

AMERICAS

DV-5A Valves with Galvanized Trim (See Figure 5)

Specify: Size (specify), DV-5A Automatic Water Control Valve, (specify) end connection with assembled galvanized Americas, Electric Actuation Trim, P/N (specify):

| | |
|--------------------------|-----------|
| Grooved x Grooved | |
| 1 1/2 in. (DN40) | 550010315 |
| 2 in. (DN50) | 550010320 |
| 3 in. (DN80) | 550010330 |
| 4 in. (DN100) | 550010340 |
| 6 in. (DN150) | 550010360 |
| 8 in. (DN200) | 550010380 |

| | |
|-----------------------------|-----------|
| Flange x Flange ANSI | |
| 3 in. (DN80) | 550020330 |
| 4 in. (DN100) | 550020340 |
| 6 in. (DN150) | 550020360 |
| 8 in. (DN200) | 550020380 |

| | |
|------------------------------|-----------|
| Flange x Grooved ANSI | |
| 3 in. (DN80) | 550030330 |
| 4 in. (DN100) | 550030340 |
| 6 in. (DN150) | 550030360 |
| 8 in. (DN200) | 550030380 |

| | |
|------------------|-----------|
| T x T NPT | |
| 1 1/2 in. (DN40) | 550060315 |
| 2 in. (DN50) | 550060320 |

Note: Pressure switches, P/N 52-287-1-124 solenoid valve, and psi/kPa water pressure gauges are provided.

Separate DV-5A Valves without Trim

See Table A for flange drilling specifications.

Specify: Size (specify), DV-5A Automatic Water Control Valve, (specify) end connection, P/N (specify):

| | |
|------------------------|-----------|
| Groove x Groove | |
| 1 1/2 in. (DN40) | 530010015 |
| 2 in. (DN50) | 530010020 |
| 3 in. (DN80) | 530010030 |
| 4 in. (DN100) | 530010040 |
| 6 in. (DN150) | 530010060 |
| 8 in. (DN200) | 530010080 |

| | |
|-----------------------------|-----------|
| Flange x Flange ANSI | |
| 3 in. (DN80) | 530020030 |
| 4 in. (DN100) | 530020040 |
| 6 in. (DN150) | 530020060 |
| 8 in. (DN200) | 530020080 |

| | |
|-----------------------------|-----------|
| Flange x Groove ANSI | |
| 3 in. (DN80) | 530030030 |
| 4 in. (DN100) | 530030040 |
| 6 in. (DN150) | 530030060 |
| 8 in. (DN200) | 530020080 |

| | |
|------------------|-----------|
| T x T NPT | |
| 1 1/2 in. (DN40) | 530060015 |
| 2 in. (DN50) | 530060020 |

Notes:

Valves are typically provided with flange drilling per ANSI B16.1 (Class 125) or ISO (7005-2 PN16).

Upon request, valves can be provided with flange drilling per JIS B 2210 or AS 2129. In which case part numbers are not assigned.

DV-5A Valve Trim Semi-Assembled (See Figure 6)

Specify: Size (specify), finish (specify), Electric Actuation Trim for DV-5A Automatic Water Control Valves used in Deluge Fire Protection System, P/N (specify):

| | |
|-------------------|-----------|
| Galvanized | |
| 1 1/2 in. (DN40) | 540000320 |
| 2 in. (DN50) | 540000320 |
| 3 in. (DN80) | 540000330 |
| 4 in. (DN100) | 540000340 |
| 6 in. (DN150) | 540000360 |
| 8 in. (DN200) | 540000380 |

EMEA

DV-5A Valves with Galvanized Trim

Specify: Size (specify), DV-5A Automatic Water Control Valve, (specify) end connection with assembled galvanized EMEA, Electric Actuation Trim, P/N (specify):

T x T ISO

| | |
|------------------------|------------|
| 1 1/2 in. (DN40) | .530070015 |
| 2 in. (DN50) | .530070020 |

Notes:

Valves are typically provided with flange drilling per ANSI B16.1 (Class 125) or ISO (7005-2 PN16).

Upon request, valves can be provided with flange drilling per JIS B 2210 or AS 2129. In which case part numbers are not assigned.

DV-5A Valve Trim

Specify: Size (specify), finish (specify), Electric Actuation Trim for DV-5A Automatic Water Control Valves used in Deluge Fire Protection System, P/N (specify):

Galvanized

| | |
|------------------------|------------|
| 1 1/2 in. (DN40) | .540100320 |
| 2 in. (DN50) | .540100320 |
| 3 in. (DN80) | .540100330 |
| 4 in. (DN100) | .540100340 |
| 6 in. (DN150) | .540100360 |
| 8 in. (DN200) | .540100380 |

Note: Pressure switches, solenoid valves for electric actuation, water pressure gauges, and BFV-300 Butterfly Valve are separately ordered. NPT to ISO threaded adaptors are provided for External Trim Connections (drains, pressure switches, water motor alarms, etc.).

APAC

DV-5A Valves with Galvanized Trim

Specify: Size (specify), DV-5A Automatic Water Control Valve, (specify) end connection with assembled galvanized APAC, Electric Actuation Trim, P/N (specify):

Grooved x Grooved

| | |
|------------------------|------------|
| 1 1/2 in. (DN40) | .550010315 |
| 2 in. (DN50) | .550010320 |
| 3 in. (DN80) | .550010330 |
| 4 in. (DN100) | .550010340 |
| 6 in. (DN150) | .550010360 |
| 165,1 mm | .550010366 |
| 8 in. (DN200) | .550010380 |

Flange x Flange ANSI

| | |

| 8 in. (DN200) | .530050080 |

T x T ISO

| | |
|------------------------|------------|
| 1 1/2 in. (DN40) | .530070015 |
| 2 in. (DN50) | .530070020 |

Notes:

Valves are typically provided with flange drilling per ANSI B16.1 (Class 125) or ISO (7005-2 PN16).

Upon request, valves can be provided with flange drilling per JIS B 2210 or AS 2129. In which case part numbers are not assigned.

DV-5A Valve Trim

Specify: Size (specify), finish (specify), Electric Actuation Trim for DV-5A Automatic Water Control Valves used in Deluge Fire Protection System, P/N (specify):

Galvanized

| | |
|------------------------|------------|
| 1 1/2 in. (DN40) | .540000320 |
| 2 in. (DN50) | .540000320 |
| 3 in. (DN80) | .540000330 |
| 4 in. (DN100) | .540000340 |
| 6 in. (DN150) | .540000360 |
| 8 in. (DN200) | .540000380 |

Valve Trim Accessories

DV-5A Valve Trim Accessories

(for separately ordered valve trim)

Specify: (Specify Accessory Description), P/N (specify):

| | |
|---|------------------|
| Waterflow Pressure Alarm Switch PS10-2 (America) | 25710 |
| Waterflow Pressure Alarm Switch (APAC) | .25710 OR 100102 |
| Waterflow Pressure Alarm Switch (EMEA) | 0260 OR 100101 |
| Model WMA-1 Water Motor Alarm (America/APAC) | .526301001P |
| Model WMA-1 Water Motor Alarm (EMEA) | .526301021R |
| Water Gauges with bar/psi | .025500013 |
| 600 psi Water Gauge psi/kPa (service pressure over 300 psi) | .923431004 |
| Solenoid Valves for Releasing Service | Refer to TFP2180 |

DV-5A Valve Replacement Parts

Specify: (Description) for use with (specify size) DV-5A Automatic Water Control Valve, P/N (See Figure 1)

DV-5A Valve Trim Replacement Parts

Specify: (Description) for use with DV-5A Valve Trim, P/N (See Figure 6)

DV-5A Appendix Poster Printing Instructions

General Description

The appendix found at the end of this document provides valve setting and testing/inspection procedures summarized from the Care and Maintenance section.

Some jurisdictions require a copy of the Summary Instructions appendix to be displayed in proximity to a DV-5A Automatic Control Valve riser supplying a fire protection system.

Reproduce as an individual poster by printing on appropriate media.

A form of protection is recommended to prevent damage which could render the poster illegible. Conditions to avoid include moisture infiltration, fading, mutilation, etc.. Protective measures may include lamination, placement within an impact- and water-resistant frame, etc.

The format shown in this document is landscape orientation on US Tabloid size, also known as ANSI B drawing format, both roughly comparable to ISO A3 size format.

To avoid potential cropping of content when printing to A3 format, select options such as print to fit or scale to fit. Depending on printer capability content will be slightly reduced but should remain readable.

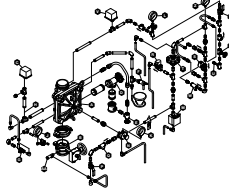

See Print Format Dimensions Table for details.

**Summary Instructions
DV-5A Automatic Water Control Valve
Reaction Type A Systems
(EN12845 Compliance)**

NOTICE
The procedures provided are summary instructions of the complete procedures appearing in Technical Data Sheet TFP1321. If procedures appear, consult full document.

Valve Setting Procedure

1. Close System Main Control Valve (B), Discharge Supply Valve (P), and Air Supply Control Valve (S) and (C).
2. Open Main Drain Valve (D). System Main Control Valve (B) will automatically operate. Allow riser plug from Air Supply Strainer (R) to drain any water and ensure it is clean and free of debris. Close auxiliary drain valves, System Drain Valve (E), and Instandby Air Supply Strainer (R) after water stops discharging. Leave Main Drain Valve (D) open.
3. Ensure Pressure Gauge Valves and Alarm Control Valve (A), as applicable, are open.
4. Operate plug-in of Automatic Drain Valve (F) to verify it is open.
5. Close Discharge Supply Strainer (C). Flush riser by operating the Discharge Supply Valve (P).
6. Restore operational automatic sprinklers on system piping.
7. Reset D/C Valve Releasing Inlet in accordance with manufacturer's instructions.
8. Re-establish system air pressure to reset Manual D/C Dry Pilot Actuator (T) by opening Air Supply Control Valve (S) and (C) and open D/C Dry Pilot Actuator (T) at the time. Observe D/C Pilot Actuator (T) for pressure on T/P Pilot Gauge (G).
9. Close Manual Control Station (M). Then, open Discharge Supply Valve (P). After several minutes of air discharge from Manual Control Station (M) control valve, verify clear venting. Do not close Inlet Gauge (G).
10. After several minutes of air discharge, reset Manual Reset Actuator (N) until water stops discharge (C).
11. With discharge operational, temporarily close Discharge Supply Valve (P), observe Discharge Gauge (K) for a drop in pressure. If pressure drop is noted, replace DV-5A Discharge and control any leak before proceeding.
12. If Discharge Gauge (K) indicates no drop in pressure, re-open Discharge Supply Valve (P) and proceed.
13. Discharge Gauge (K) indicates no drop in pressure, re-open Discharge Supply Valve (P).
14. Partially open System Main Control Valve (B). Slowly close Main Drain Valve (D) as water discharges from Main Drain Valve (D). Observe Automatic Drain Valve (F) for leaks. If there are leaks, correct the leakage problem.
15. Close Gauge Valve (G) and close Manual Control Station (M) and burst new break out in small hole.
16. Close System Main Control Valve (B).
17. Close System Main Control Valve (B).
18. After setting the automatic pressure, verify proper authorities and submit those responsible for monitoring/operating control station status.

Warning Alarm Test Procedure

1. Close System Main Control Valve (B) and open Main Drain Valve (D).
2. Test design warning panel in accordance with manufacturer's instructions to energize the Warning Alarm (W).
3. Verify that water is flowing from Selected Valve (P) drain connection.
4. Verify Discharge Chamber pressure has increased to below 25% of water supply pressure.
5. Repeat minimum detection sequence in accordance with manufacturer's instructions to re-energize Warning Alarm (W). Water should stop flowing from Selected Valve (P) but remain draining from Manual Reset Actuator (N).
6. Press Reset Knob on Manual Reset Actuator (N) and hold a few seconds until water stops flowing.
7. After system pressure is established, repeat Selected Valve (P) and Manual Reset Actuator (N) for leaks. Correct any leaks before proceeding.
8. Partially open System Main Control Valve (B). Slowly close Main Drain Valve (D) as water discharges from Main Drain Valve (D). Observe Automatic Drain Valve (F) for leaks. If there are leaks, correct the leakage problem. If there are no leaks, place DV-5A in service and return Manual Control Station (M) to normal.

System Valve and Dry Pilot Actuator Test Procedure

1. Close System Main Control Valve (B) and open Main Drain Valve (D).
2. Simulate power failure by disconnecting main power to warning panel, and disconnecting battery backup power. Refer to warning panel manufacturer's instructions for specific details. This will allow Selected Valve (P) to open.
3. Open Instandby Air Supply Control Valve (R) to supply control valve (C).
4. Verify system air pressure is established. Test Connection to release system air pressure.
5. Verify Discharge Chamber pressure decreased to below 25% of water supply pressure.
6. Close Instandby Air Supply Control Valve (R) and open System Main Control Valve (B). Water should stop flowing from Dry Pilot Actuator (T) but continue to drain from Manual Reset Actuator (N). Press Reset Knob on Manual Reset Actuator (N) and hold a few seconds until water stops flowing from drain tube.

2. Pressure will then build up in DV-5A Discharge Chamber.
3. After system pressure is restored, repeat Selected Valve (P) and Manual Reset Actuator (N) for leaks. Verify leaks must be corrected before proceeding.
4. Reestablish battery and main power to releasing panel in accordance with manufacturer's instructions. Verify that water is flowing from Selected Valve (P) drain connection.
5. After system pressure is established, test Connection to release system air pressure from system. Verify System Low Pressure Alarm Switch (V) is operational and low pressure will permit re-energizing of the low water monitoring system. Low pressure will permit re-energizing of the low water monitoring system. Verify that water is flowing from Dry Pilot Actuator (T).
6. Close system's Instandby Air Supply Control Valve (R). After water supply pressure is established, re-establish. As necessary, open, then close quick fit air supply control valve in operational or inoperative device. Supervised Low Pressure Alarm Switch (V) should return to normal.
7. Verify system air pressure is correct and DV-5A Discharge Chamber remains pressurized.
8. Partially open System Main Control Valve (B). Slowly close Main Drain Valve (D) as water discharges from Main Drain Valve (D). Observe Automatic Drain Valve (F) for leaks. If there are leaks, correct the leakage problem. If there are no leaks, place DV-5A in service and return Manual Control Station (M) to normal.

Operation Test Procedure

1. To prevent water from flowing beyond main, close System Main Control Valve (B). Close Main Drain Valve (D).
2. Close System Main Control Valve (B) one turn beyond which water begins to flow from Main Drain Valve (D). Slowly close Main Drain Valve (D).
3. Test design warning panel in accordance with manufacturer's instructions to energize Warning Alarm (W).
4. Verify DV-5A Valve has tripped, as indicated by water flow into system.
5. Close System Main Control Valve (B).
6. Close Discharge Supply Valve (P) and Air Supply Control Valve (S) and (C).
7. Close DV-5A Valve with Instandby Test & Stop in accordance with Valve Setting Procedure.

Normal Valve Inspection

1. Inspect the valve. Inspect 1/4 of the Valve Setting Procedure is completed prior to proceeding with the normal valve inspection.
2. Remove the Supply Line between the Discharge Supply Valve (P) and the System Main Control Valve (B). Inspect the Supply Line between the Supply Line between the Discharge Supply Valve (P) and Instandby Test & Stop (T) Valve (A).
3. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Remove Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and inspect.
4. Inspect the Discharge Valve Control hardware, always Discharge Cover and perform normal valve inspection. Check valve stem and replace parts as necessary.
5. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
6. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
7. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
8. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
9. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
10. Using the union, secure the Instandby Air Supply Control Valve (R) to the Discharge Cover.
11. Reestablish the Supply Line between the Discharge Supply Valve (P) and the System Main Control Valve (B). Inspect the Supply Line between the Supply Line between the Discharge Supply Valve (P) and Instandby Test & Stop (T) Valve (A).
12. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
13. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
14. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
15. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
16. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
17. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
18. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
19. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
20. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
21. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
22. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
23. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
24. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
25. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
26. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
27. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
28. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
29. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
30. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
31. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
32. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
33. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
34. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
35. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
36. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
37. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
38. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
39. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
40. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
41. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
42. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
43. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
44. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
45. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
46. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
47. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
48. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
49. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
50. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
51. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
52. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
53. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
54. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
55. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
56. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
57. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
58. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
59. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
60. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
61. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
62. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
63. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
64. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
65. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
66. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
67. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
68. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
69. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
70. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
71. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
72. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
73. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
74. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
75. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
76. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
77. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
78. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
79. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
80. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
81. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
82. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
83. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
84. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
85. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
86. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
87. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
88. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
89. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
90. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
91. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
92. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
93. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
94. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
95. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
96. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
97. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
98. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
99. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.
100. Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N). Inspect the Instandby Air Supply Control Valve (R) and Manual Reset Actuator (N) and replace parts as necessary.

| Component | Description |
|--|--|
| 1. Discharge Supply Valve (P) | Discharge Supply Valve (P) |
| 2. System Main Control Valve (B) | System Main Control Valve (B) |

Summary Instructions DV-5A Automatic Water Control Valve Deluge Fire Protection Systems Electric Actuation Trim

NOTICE

The procedures provided are summary instructions of the complete procedures appearing in Technical Data Sheet TFP1321. If problems occur, consult full document.

| Item | Description |
|------|--------------------------------|
| A | DV-5A Valve |
| B | System Main Control Valve |
| C | Waterflow Pressure Switch |
| D | Main Drain Valve |
| E | System Drain Valve |
| F | Automatic Drain Valve |
| G | Alarm Test Valve |
| H | Alarm Control Valve (Optional) |
| J | Water Supply Gauge |

| Item | Description |
|------|-------------------------------|
| K | Diaphragm Gauge |
| L | System Gauge (Optional) |
| M | Manual Control Station |
| N | Manual Reset Actuator |
| P | Diaphragm Supply Valve |
| Q | Diaphragm Supply Strainer |
| R | Inverted Flare Shut-Off Valve |
| S | Solenoid Valve |

Valve Setting Procedure

1. Close system main control valve (B) and diaphragm supply valve (P).
2. Open main drain valve (D), system drain valve (E), and all auxiliary drains in the system. Close auxiliary drain valves and system drain valve (E) after water stops discharging. Leave the main drain valve (D) open. Ensure that the pressure gauge valves and the alarm control valve (H) are open.
3. Depress plunger of automatic drain valve (F) to verify it is open.
4. Clean diaphragm supply strainer (Q). Flush strainer by opening the diaphragm supply valve (P).
5. Reset electric detection system in accordance with manufacturer's instructions to de-energize solenoid valve (S).
6. Open manual control station (M) and diaphragm supply valve (P). After aerated water stops discharging, slowly close the operating lever. Do not close the hinged cover at this time.
7. After aerated water stops discharging, reset the manual reset actuator (N) until pressure reaches approximately 15 psi (1,0 bar) on the diaphragm gauge (K) and water stops flowing from the drain tube.
8. With diaphragm chamber pressurized, temporarily close diaphragm supply valve (P) and observe diaphragm gauge (K) for a drop in pressure. If a pressure drop is noted, correct any leaks before proceeding.
9. If diaphragm gauge (K) indicates no drop in pressure, re-open the diaphragm supply valve (P) and proceed.
10. Partially open system main control valve (B). Slowly close main drain valve (D) as water discharges from main drain valve (D). Observe automatic drain valve (F) for leaks. If there are leaks, correct the leakage problem.
11. When system main control valve (B) is partially opened, the pressure on DV-5A diaphragm chamber may increase. If pressure is greater than valve trim maximum pressure, relieve pressure to at least valve trim pressure rating. Do not allow pressure to drop below supply pressure shown on water supply gauge (J) which may result in tripping of DV-5A valve.
12. Close hinged cover of manual control station (M). Insert a new break rod in the small hole through the top of the enclosing box.
13. Open system main control valve (B).
14. After setting fire protection system, notify proper authorities and advise those responsible for monitoring proprietary and/or central station alarms.

Drop in Water Supply Pressure Below Normal Range

1. Note water supply pressure by the diaphragm gauge (K) and determine if the pressure is within normally expected range.
2. If below normal range, correct any leakage from diaphragm chamber prior to resetting the system.
3. When water supply pressure is restored, reset DV-5A valve in accordance with the Valve Setting Procedure.

Waterflow Alarm Test Procedure

1. Open alarm test valve (G), allowing water to flow to waterflow pressure switch (C) and/or water motor alarm. Close the alarm test valve (G) when test is completed.
2. Depress plunger on automatic drain valve (F) to drain alarm line.

Electric Actuation Operation Test Procedure

1. To prevent water from flowing beyond riser, close system main control valve (B). Open main drain valve (D).
2. Open system main control valve (B) one turn beyond position which water begins to flow from main drain valve (D). Slowly close main drain valve (D).
3. Test deluge releasing panel in accordance with manufacturer's instructions to energize solenoid valve.
4. Verify DV-5A valve has tripped, indicated by flow of water into system.
5. Close system main control valve (B).
6. Close diaphragm supply valve (P).
7. Reset DV-5A valve in accordance with the Valve Setting Procedure.

Electric Actuation Solenoid Valve Test Procedure

1. Close system main control valve (B).
2. Open main drain valve (D).
3. Test deluge releasing panel in accordance with manufacturer's instructions to energize solenoid valve (S).
4. Verify water flow from solenoid valve drain connection.
5. Verify diaphragm chamber pressure decreases to below 25% of water supply pressure.
6. Reset electric detection system in accordance with manufacturer's instructions to de-energize solenoid valve (S).
7. Water should cease draining from solenoid valve (S) but remain draining from manual reset actuator (N)
8. Press reset knob on manual reset actuator (N) and hold it a few seconds until water stops flowing from its drain tube
9. Pressure will then build up in DV-5A diaphragm chamber.
10. After system pressure is restored, inspect solenoid valve (S) and manual reset actuator (N) for leaks at drain tube. Any leaks must be corrected before proceeding.
11. Partially open system main control valve (B). Slowly close main drain valve (D) as soon as water discharges from main drain valve (D). Observe automatic drain valve (F) for leaks. If there are leaks, correct the leakage problem. If there are no leaks, the DV-5A valve is ready to be placed in service and system main control valve (B) must then be fully opened.

Internal Valve Inspection

1. Ensure that Steps 1 to 4 of the Valve Setting Procedure are completed prior to proceeding with the Internal Valve Inspection.
2. Ensure diaphragm supply valve (P) is closed. If provided as part of the valve trim, close inverted flare shut-off valve (R).
3. Remove the supply line between the diaphragm supply valve (P) and the system main control valve (B). If provided as part of the valve trim, remove the supply line between the diaphragm supply valve (P) and inverted flare shut-off valve (R).
4. Loosen union securing actuation trim and remove actuation trim.
5. Remove union between diaphragm cover and MRA-1 manual reset actuator (N). Remove MRA-1 manual reset actuator (N) subassembly.
6. Remove diaphragm valve cover hardware, slowly remove diaphragm cover and perform internal valve inspection. Clean valve interior and replace parts as necessary.
7. Ensure diaphragm is properly oriented and proper hardware arrangement is utilized.
8. Insert long hex bolts. Align diaphragm with valve body, and then align diaphragm cover with valve body. Insert short hex bolts. Hand-tighten all fasteners.
9. Using crossdraw sequence, wrench-tighten long hex bolts and short hex bolts. Repeat crossdraw sequence two to three times at incremental torque values.
10. Inspect to assure all hex bolts are securely tightened.
11. Using the union, secure the MRA-1 manual reset actuator to the diaphragm cover.
12. Using union, secure actuation trim.
13. Replace the supply line between the diaphragm supply valve and the system main control valve (B). If provided as part of the valve trim, replace supply line between diaphragm supply valve (P) and inverted flare shut-off valve (R).
14. Ensure unions and flare fittings are securely tightened.
15. If provided with the valve trim, and with diaphragm supply valve (P) closed, fully open inverted flare shut-off valve (R) stainless steel screw (approximately 1/2 in.) until resistance is met.
16. Proceed with Step 5 of the Valve Setting Procedures.
